

Reading List Project

Pete Hutchison

Introduction

I'm Pete!

The aim of this project was to
create a CRUD application
with a database, API &
front-end

I chose the topic of a
reading list

Contents

1

Planning

How I prepared for the project and what tools I used

2

Back-end

How the back-end was constructed

3

Front-end

How the front-end was constructed

4

Demonstration

A quick demo of how to use the reading list

5

Summary

Sprint review & retrospective for the project

6

Questions

Any questions you have at the end

1

Planning

How I prepared for the project and
what tools I used

Project timeline

Monday

Construct Jira board,
write back-end tests,
some documentation

Wednesday

Finish front-end
functionality & begin
styling

Friday

Present project & add
any final touches if
necessary

Tuesday

Write back-end
functionality & begin
front-end

Thursday

Finish styling for
front-end, complete
readme &
documentation

Jira board

Projects / Reading List Project

3

Front-end

How the front-end was
constructed

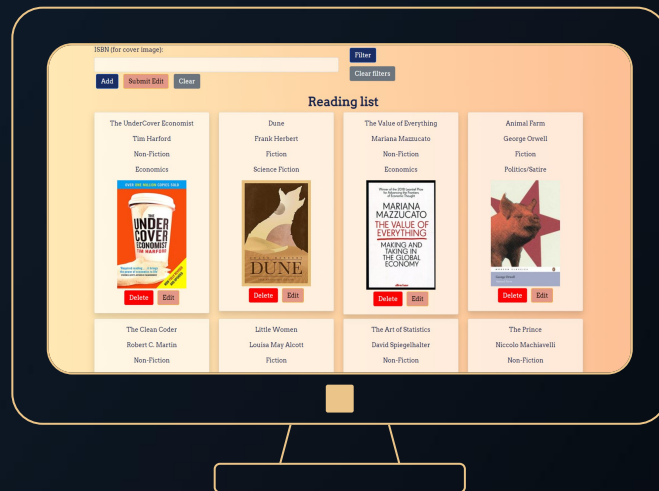

Front-end Technologies

- Standard HTML, CSS and JavaScript were used to build the front-end
 - All of it was written in VSCode
- Frequent usage of the Live Server extension to view changes as they were made
 - Internet Archive's Open Library API was used to retrieve book covers
 - Bootstrap framework was used for styling and to add responsiveness

4

Demonstration

Quick demo of how to use the reading list

The background is a dark navy blue. On the left side, there are two large, overlapping, curved gold lines that sweep from the top left towards the bottom right. On the right side, there is a single, thick, curved gold line that starts near the top right and curves downwards towards the bottom right.

5

Summary

Sprint review & retrospective
for the project

Sprint Review

What did I complete?

I met every objective in the project specification (MVP)

Learned how to use the relevant tools and technologies and implemented them across the project appropriately

Managed to adhere to TDD and kept documentation of the project to detail the work I completed

What got left behind?

I had hoped to include use of Selenium for front-end testing, but there wasn't time it to be covered before/during the project week

While not in the Sprint for the week, use of modals could have improved useability

Sprint Retrospective

What went well?

Creating the back-end was a smooth and quick process using Spring & managed to incorporate TDD comfortably as well

Planning & organising the project using Jira, and setting myself daily tasks/deadlines to make sure I stayed on track to complete everything I wanted to

Using online resources such as Open Library's API, Bootstrap docs, W3Schools etc. to quickly find solutions to any problems I came across

What could be improved?

With more experience, I could have a clearer picture of how to design & style a front-end so that looks better and more professional

Conclusion

I'm happy to met all the objectives within the project specification

I've learnt a lot of new skills - particularly on the front-end dev side

I'm excited to improve and try out these new skills on future projects!

Thanks!
